b. DOMESTIC LEGISLATION AND REGULATIONS

1. STRAIGHT BASELINES

A. LEGISLATION. Following are extracts from the Irish Maritime Jurisdiction Act, effective 1 October 1959, enabling a straight baseline system:

- 4. (1) Save as otherwise provided, the baseline is the low-water mark--
 - (a) on the coast of the mainland or of any island, or
 - (b) on any low-tide elevation situated wholly or partly at a distance not exceeding three nautical miles from the mainland or an island.
- (2) The Government may by order prescribe straight baselines in relation to any part of the national territory and the closing lines of any bay or mouth of a river, and any line so prescribed shall be taken as the baseline.
- (3) The Government may by order revoke or amend an order under subsection (2).
- 5. The internal or inland waters of the State shall extend to all sea areas which lie on the landward side of the baseline of the territorial seas and all such areas shall be subject to the jurisdiction of the State to the same extent in all respects as its ports and harbours, bays, lakes and rivers, subject to any rights of innocent passage for foreign ships in those sea areas which previously had been considered as part of the territorial seas or the high seas.

The coordinates below are extracted from Statutory Instrument No. 173, effective 1 January 1960, establishing the Irish straight baselines.

B. ANALYSIS The following comments regarding Ireland's straight baseline system are extracted from Limits in the Seas, No. 3, "Straight Baselines: Ireland," 23 January 1970:

The fifty points specified in the Order are situated: a) twenty-one on capes of the mainland, b) an equal number on islands or islets and c) the remaining eight points on rocks. No low-tide elevations or drying rocks have been utilized. All straight baselines begin and terminate on the mainland of Ireland with a single exception. Point No. 20 is on South Island of the Aran Islands. The next point, No. 21, comprises the southeast corner of adjacent Inishmore island in the same group. Because of geographic configuration and the lack of gain in the sea, a line has not been drawn to connect these two points. In effect, however, this means that the continuous baseline is drawn so as to enclose Galway Bay within the Irish internal waters. The low water line of Inishmore effectively joins the points.

The Irish Government has applied the straight baseline principle in a unique manner. Six straight baselines alternate with seven normal baselines utilizing the low water line of the mainland or of adjacent islands. The eastern coast, on the Irish Sea, which is generally only locally indented and which lacks offshore islands, has not been supplemented by straight baselines. In the north, the coast between the boundary fjord (Lough Foyle) and Malin Head, a point on Ireland's North Point, forms the baseline. To the west and south, however, a series of baselines stretch to the southeast cape of Ireland. The straight baselines have replaced the low water line for more than 90% of this part of the coast. The individual segments of the Irish straight baselines measure approximately as follows:
